**FAST FARM FENCING**

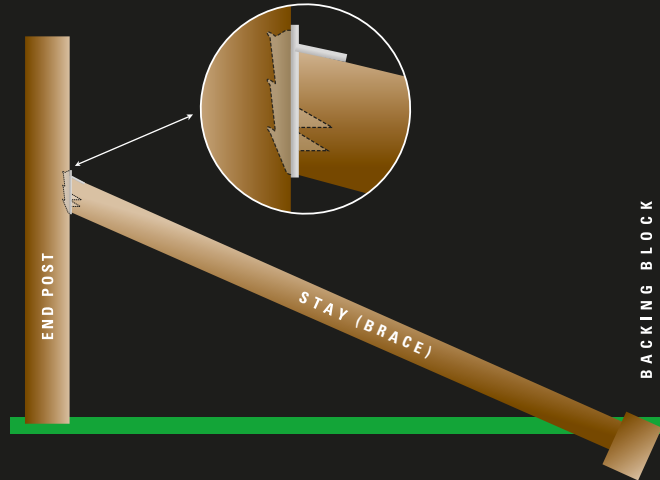

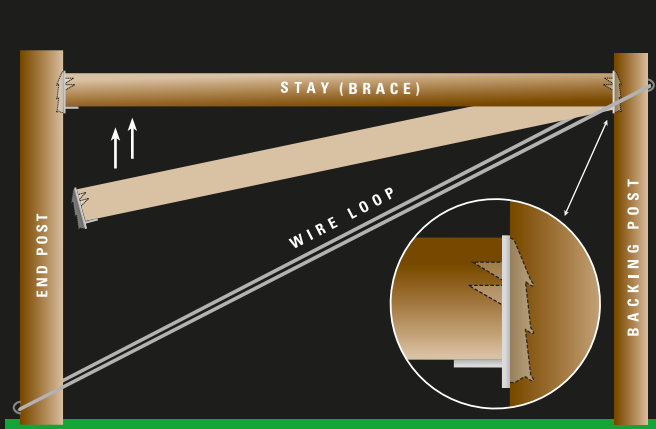

# VICEBITE®

## FENCE BRACKETS

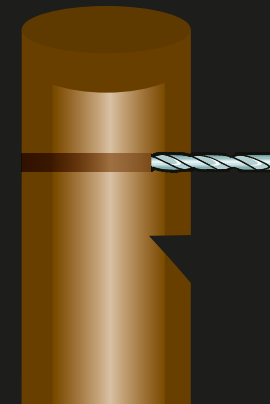

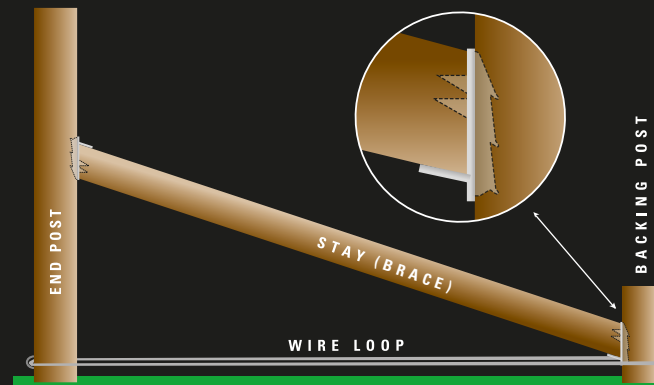

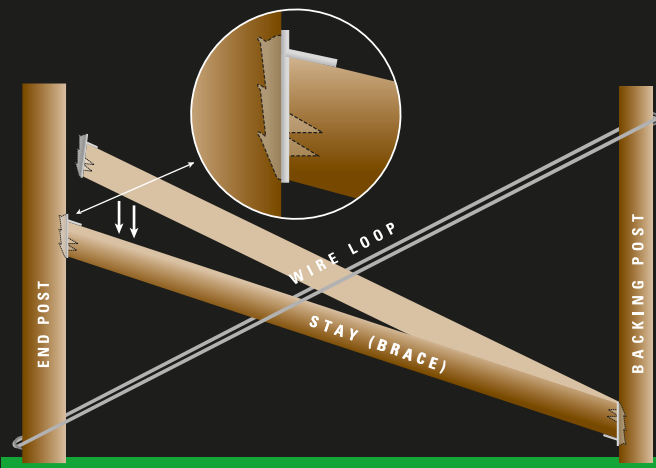

- ✓ Quick and easy assemblies for vineyards and general fencing
- ✓ Suitable for soft and hard timber, including recycled plastic posts.
- ✓ Creates a strong, long lasting end assembly
- ✓ Reduce digging and labour costs
- ✓ Wire straining forces bracket to bite into timber
- ✓ Retain the natural strength of timber posts by not exposing the untreated core or notching the surface area.

Cut the stay to suit the distance between both posts, allowing 5mm for the two brackets. Once the bracket is in position, a quick tap at the top of the bracket will lock it into position and stop it from riding back up the post

Timber treatment can vary and may only penetrate 10-30mm into the post.

Vicebite teeth only bite into the treated zone so they don't expose the untreated core to the elements

Vicebite's teeth are designed to run along the timber grain to ensure the natural strength is retained and this also helps the bracket to slide down the post into position.
